

CO-ORDINATES: SET 3

Using the “Where are we?” grid draw the symbols (letters, numbers, etc.) represented by the co-ordinates given in each question. In some cases you can draw a continuous line through the points identified by co-ordinates, e.g. the letter Z. In other cases you will need to draw more than one, e.g. the letter A. The number of lines will be shown in the question, as well as the type of resulting symbol. Note that in some cases the continuous line may cross over the line that has already been drawn.

The co-ordinates of a point may sometimes not fall precisely on a grid line. It may then be necessary to use co-ordinates such as 2.5, 6.5 etc. It will make it easier to draw the curved lines which are needed to represent letters such as B, C, D, G, J etc., and numbers such as 2, 3, 5, 6 etc. The curves are shown by a set of straight lines, and the curves can be drawn in free-hand.

What are the symbols represented by the following co-ordinates?

As in Set 1, the number of lines needed and the type of symbol are given.

1. 4, 5: 4, 15: 6, 15: 7.5, 14.5: 8, 13: 8, 11.5: 7, 10.5: 4, 10.5:
Line 2 7, 10.5: 8.5, 9: 8.5, 7: 7, 5.5: 4, 5 (2 lines, letter)
2. 6, 14: 8, 15: 10, 14: 10.5, 13: 10, 10: 9, 8: 7, 6: 6, 5: 11, 5:
(1 line, number)
3. 6, 6: 6, 16: 7, 16: 9, 15.5: 10, 14: 10, 12: 9, 11: 6, 11
(1 line, letter)
4. 6, 6: 6, 16: line 2: 12, 6: 12, 16: line 3: 6, 11: 12, 11:
(3 lines, letter)
